

ORDINANCE NO. _____

AN ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO REPEALING AND REPLACING SAN ANSELMO MUNICIPAL CODE TITLE 9 (BUILDING REGULATIONS) CHAPTER 19 (GREEN BUILDING REQUIREMENTS) TO ADOPT AMENDMENTS TO THE CALIFORNIA GREEN BUILDING STANDARDS CODE TO REFLECT LOCAL CONDITIONS

WHEREAS, green building is a practice of design, construction and maintenance techniques that have been demonstrated to have a significant positive effect on energy, water and resource conservation, waste management and pollution generation and on the health and productivity of building occupants over the life of the building; and

WHEREAS, on November 24, 2010, the Town Council adopted a Green Building Ordinance, which was codified in San Anselmo Municipal Code Title 9, Chapter 19; and

WHEREAS, on November 12, 2019, the Town Council adopted by reference the California Construction Codes, including the 2019 California Green Building Standards Code (CALGreen) (Title 24 Part 11); and

WHEREAS, on April 28, 2020, the Town Council adopted the County Green Building provisions into the Town Municipal Code pursuant to Town Ordinance No. 1145; and

WHEREAS, on November 15, 2022, the Town Council adopted by reference the California Construction Codes, including the 2022 version of CALGreen; and

WHEREAS, on November 15, 2022, the County of Marin adopted amendments to CALGreen to reflect local conditions in the County (“County Green Building Ordinance”); and

WHEREAS, the San Anselmo Planning Commission discussed San Anselmo’s potential adoption of the County Green Building Ordinance at its meeting of February 6, 2023; and

WHEREAS, the San Anselmo Climate Action Commission discussed staff recommendations for adoption of the County Green Building Ordinance at its meeting of June 16, 2023 and was supportive of the recommendations; and

WHEREAS, the Town Council discussed the County Green Building Ordinance at its meetings of February 14, 2023 and June 27, 2023; and

WHEREAS, the Town Council desires to adopt the County Green Building Ordinance with modifications, as its provisions are appropriate for the Town and will allow for more consistent Green Building requirements in Marin jurisdictions;

NOW, THEREFORE, THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1. Environmental Review

Adoption of this Ordinance does not require review under the California Environmental Quality Act (CEQA) because it does not constitute a “project” pursuant to California Public Resources Code section 21065 and CEQA Guidelines section 15378, as its adoption does not involve an activity that has the potential to cause a direct or reasonably foreseeable indirect physical change in the environment.

SECTION 2. Findings

Pursuant to Section 17958.5, 17958.7 and 18941.4 of the California Health and Safety Code, the Town Council of the Town of San Anselmo determines that the modifications to the 2022 California Green Building Standards Code Chapters 3, 4 and 5, as set forth in this subchapter, are reasonably necessary because of San Anselmo's local topographical and environmental conditions. Specifically, the steep terrain, narrow roads, proximity to the San Andreas and Hayward seismic faults, and the potential flooding of the San Anselmo Creek are unique conditions that require special consideration whenever construction is proposed within the Town. Additionally, due to the high temperatures, humidity, rainfall, wind, and the lack of water supply for domestic use and fire suppression, the Town is susceptible to wildfires resulting from climate change.

SECTION 3. Repeal and Replace Title 9 (Building Regulations) Chapter 19 (Green Building Requirements).

San Anselmo Municipal Code Title 9, Chapter 19 is hereby repealed and replaced with the following in its entirety.

9-19.010 Purpose.

The purpose of this chapter is to meet or exceed all applicable mandatory measures of the California Green Building Standards Code known as California Code of Regulations, Part 11 of Title 24 and to enhance the long-term public health and welfare by contributing to the overall reduction of greenhouse gas emissions and improving the environmental and economic health of the Town through the efficient design, construction, operation, maintenance and deconstruction of buildings and site development by incorporating green building practices and materials.

The green building provisions referenced in this chapter are designed to achieve the following objectives in San Anselmo:

- (1) Increase energy efficiency in buildings;
- (2) Reduce consumption of fossil fuels;
- (3) Encourage water and resource conservation;
- (4) Reduce waste generated by construction projects;
- (5) Reduce long-term building operating and maintenance costs;
- (6) Improve indoor air quality and occupant health;
- (7) Contribute to meeting state and local commitments to reduce greenhouse gas emissions; and
- (8) Satisfy all applicable mandatory measures of the 2022 California Green Building Standards Code (Title 24, Part 11) of the California Code of Regulations.

9-19.015 - Applicability.

The provisions of this chapter shall apply to all construction or development projects defined below as a "covered project."

9-19.020 - Definitions.

For the purposes of interpreting this chapter and the associated standards for compliance, the following terms are defined as follows. When the definitions below differ from those contained elsewhere in this title, the provisions of this chapter shall apply. These definitions are additional to those outlined in Chapter 2 of the CALGreen Code.

(1) "2022 California Energy Code" refers to the requirements outlined in the 2022 edition of the California Energy Code known as California Code of Regulations, Part 6 of Title 24.

(2) "All-electric Building" or "All-electric Design" means a building or plans for a building that uses a permanent supply of electricity as the source of energy for all space heating (including but not limited to fireplaces), water heating (including but not limited to pools and spas), cooking appliances (including but not limited to barbecues), and clothes drying appliances, and has no natural gas or propane plumbing installed in the building or within the property lines. An all-electric building may also include solar thermal collectors.

(3) "Accessory Dwelling Unit (ADU)" means a residential unit that meets the definition of an accessory dwelling unit as outlined in Section 10-6.102 of the San Anselmo Municipal Code, Title 10, Chapter 6. This states that "an attached or detached residential dwelling unit that provides complete independent living facilities for one (1) or more persons and is located on the same lot as the proposed or existing primary residence. It shall include permanent provisions for living, sleeping, eating, cooking, and sanitation. An accessory dwelling unit also includes an efficiency unit, as defined in Section 17958.1 of the Health and Safety Code, and a manufactured home, as defined in Section 18007 of the Health and Safety Code." For purposes of this subchapter, ADU also covers Junior ADUs and detached or attached ADUs.

(4) "Automatic Load Management System (ALMS)" means a control system designed to manage load across one or more electric vehicle supply equipment (EVSE), circuits, panels, and to share electrical capacity and/or automatically manage power at each connection point. ALMS systems shall be designed to deliver no less than 3.3 kVa (208/240 volt, 16-ampere) to each EV Capable, EV Ready or EVCS space served by the ALMS, and meet the requirements of California Electrical Code Article 625. The connected amperage to the building site for the EV charging infrastructure shall not be lower than the required connected amperage per California Green Building Standards Code, Title 24 Part 11.

(5) "CALGreen" refers to the California Green Building Standards Code, as included in Title 24, Part 11 of the California Code of Regulations.

(6) "CALGreen mandatory" means those measures that are required under Title 24, Part 11. Residential mandatory measures are contained in CALGreen Chapter 4. Nonresidential mandatory measures are contained in CALGreen Chapter 5.

(7) "CALGreen Tier 1" refers to required pre-requisite and elective measures in addition to the CALGreen mandatory measures, as outlined in CALGreen Appendix A4.601.4 for residential projects and CALGreen Appendix A5.601.2 for nonresidential projects.

(8) "Commercial Kitchen" means non-retail food facility devoted to the commercial preparation, production, and cooking of food and beverages for on-site or off-site consumption.

(9) "Conductor Ready" means adding 10 gauge 4 wire for any laundry room remodel for future appliance electric upgrades and/or adding 8 gauge 4 wire for any kitchen remodel for future appliance electric upgrades.

(10) "Cooking Equipment" means equipment intended for commercial use, including ovens, ranges, and cooking appliances for use in a commercial kitchen and restaurant where food is dispensed.

(11) "Covered Project(s)" means a development project provided below as set forth by the standards for compliance outlined in Section 9-19.050 of the San Anselmo Municipal Code, Table 1, 2, or 3 for which one or more building permits are required:

- (i) All residential and nonresidential new construction buildings as defined below in Section 9-19.020 (28); and/or
- (ii) Additions or alterations to an existing Single-Family residential building, except for any projects less than 750 square feet. Conductor ready required for laundry room and kitchen remodels regardless of remodel size.
- (iii) Substantial Improvements to an existing Single-Family residential building.

(12) "Direct Current Fast Charging (DCFC)" means a parking space provided with electrical infrastructure that meets the following conditions:

- (i) A minimum of 48 kVa (480 volt, 100-ampere) capacity wiring.
- (ii) Electric vehicle supply equipment (EVSE) located within three (3) feet of the parking space providing a minimum capacity of 80-ampere.

(13) "Electric Vehicle (EV) Capable Space" means a vehicle space with electrical panel space and load capacity to support a branch circuit and necessary raceways, both underground and/or surface mounted, to support EV charging.

(14) "Electric Vehicle (EV) Ready Space" means a vehicle space which is provided with a branch circuit; any necessary raceways, both underground and/or surface mounted, to support EV charging, terminating in a receptacle or a charger.

(15) "Electric Vehicle Charging Space (EV Space)" means a space intended for future installation of EV charging equipment and charging of electric vehicles.

(16) "Electric Vehicle Charging Station (EVCS)" means a parking space that includes installation of electric vehicle supply equipment (EVSE) at an EV Ready space. An EVCS space may be used to satisfy EV Ready space requirements. EVSE shall be installed in accordance with the California Electrical Code, Article 625.

(17) "Level 1 (L1) EV Ready" means a parking space that is served by a complete electric circuit with the following requirements:

- (i) A minimum of 2.2 kVa (110/120 volt, 20-ampere) capacity wiring.
- (ii) A receptacle labeled "Electric Vehicle Outlet" or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 16-ampere.
- (iii) Conduit oversized to accommodate future Level 2 EV Ready (208/240 volt, 40-ampere) at each parking space.

(18) "Level 2 (L2) EV Ready" means a parking space that is served by a complete electric circuit with the following requirements:

- (i) A minimum of 8.3 kVa (208/240 volt, 40-ampere) capacity wiring.
- (ii) A receptacle labeled "Electric Vehicle Outlet" or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 30-ampere.

(19) "Electric Vehicle Supply Equipment (EVSE)" means the conductors, including the undergrounded, grounded and equipment grounding conductors and the electric vehicle connectors, attachment plugs, and all other fittings, devices, power outlets or apparatus

- installed for the purpose of transferring energy between the premises wiring and the electric vehicle.
- (20) “Essential Services Building” means a facility as defined by the California Health and Safety Code [section 16007](#), as amended from time to time. For purposes of this chapter, essential services buildings are publicly owned and/or publicly operated buildings whose purpose is to safeguard the public health and safety. Essential services buildings generally exclude privately owned residences and/or commercial buildings; except that, privately owned commercial buildings may qualify as essential services buildings to the extent they are publicly operated to safeguard the public health and safety.
- (21) “Food Service Establishment” means any new construction building with construction plans for a commercial kitchen or cooking equipment.
- (22) “Industrial process heat” shall be defined as a process or manufacturing equipment for which sustained temperatures typically in excess of three hundred fifty degrees Fahrenheit are required and demonstrably not achievable with commercial electric equipment.
- (23) “Low Power Level 2 Electric Vehicle Charging Receptacle” means a parking space that is served by a complete electric circuit with the following requirements:
- (i) A minimum of 4.1 kVa (208/240 volt, 20-ampere) capacity wiring.
 - (ii) A receptacle labeled “Electric Vehicle Outlet” or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 16-ampere.
 - (iii) Conduit oversized to accommodate future level 2 EV Ready (208/240 volt, 40-ampere) at each parking space.
- (24) “Mixed-fuel” means a building or unit in a building that is plumbed for the use of natural gas or propane as fuel for space heating, water heating, cooking or clothes drying appliances or has gas plumbing within a building or within the property lines of the premises connected to a gas meter or propane tank.
- (25) "Modified parking lot" shall be those for which paving material and curbing is removed.
- (26) “Natural gas” is the same meaning as "Fuel Gas" as defined in the California Plumbing Code and Mechanical Code.
- (27) “Natural gas infrastructure” means fuel gas piping, other than service pipe, in or in connection with a building, structure or within the property lines of premises, extending from the point of delivery at the meter, service meter assembly, outlet of the service regulator, service shutoff valve, or final pressure regulator, whichever is applicable, as specified in the California Mechanical Code and Plumbing Code.
- (28) “Newly Constructed” means a building that has never before been used or occupied for any purpose. Also means “Newly Constructed” as defined in the California Building Code 2022.
- (29) "Qualified green building rater" means an individual who has been trained and certified as a CALGreen inspector, LEED AP w/a specialty, GreenPoint rater, PHIUS consultant, or has similar qualifications and certifications if acceptable to the chief building official.

(30) “Single-Family” means a building designed for and/or occupied exclusively by one family. It is used herein to describe one and two-family dwellings and townhouses with attached private garages. It also includes factory-built, modular housing units, constructed in compliance with the California Building

(31) “Substantial Improvement” means any repair, reconstruction, rehabilitation, alteration, addition or other improvement of a building or structure, the cost of which equals or exceeds 50 percent of the market value of the structure before the improvement or repair is started. If the structure has sustained substantial damage, any repairs are considered substantial improvement regardless of the actual repair work performed. The term does not, however, include either:

1. Any project for improvement of a building required to correct existing health, sanitary or safety code violations identified by the building official and that are the minimum necessary to assure safe living conditions.
2. Any alteration of a historic structure provided that the alteration will not preclude the structure’s continued designation as a historic structure.

9-19.030 – Requirements for additions and alterations - Local amendments to 2022 California Energy Code.

Pursuant to Section 9-1.101(h) of the San Anselmo Municipal Code, the Town has adopted the 2022 edition of the California Energy Code known as California Code of Regulations, Part 6 of Title 24 with additions, and deletions as provided in this subchapter.

The provisions of this subchapter shall constitute local amendments to the cross-referenced provisions of the 2022 California Energy Code and shall be deemed to replace the cross-referenced sections of said Code with the respective provisions set forth in this subchapter.

The California Energy Code, Title 24, Part 6, is hereby amended as underlined and struck through:

Section 100.0 of Subchapter 1 of the 2022 California Energy Code is modified to add new section (i) as follows:

- (i) Single-Family Building Remodel Energy Reach Code - Purpose and Intent. In addition to all requirements of the California Energy Code applicable to Existing Single-Family Building additions and alterations, the energy efficiency and renewable energy measures specified in Section 150.0(w) shall be required for Covered Projects of mixed-fuel buildings.

Section 100.1(b) is modified by adding the following definitions:

"All-electric Building" or "All-electric Design" as defined in §9-19.020 (2) of the San Anselmo Municipal Code.

"Covered Project(s)" as defined in §9-19.020 (11), of the San Anselmo Municipal Code.

"Mixed-fuel" building as defined in §9-19.020 (24), of the San Anselmo Municipal Code.

Section 150.0 SINGLE-FAMILY RESIDENTIAL BUILDINGS – MANDATORY FEATURES AND DEVICES, first two paragraphs, are modified to read as follows:

Existing Single-Family residential buildings shall comply with the applicable requirements of Sections 150(a) through 150.0(v), and Covered Existing Single-Family Projects, other than projects identified as all-electric construction for new residential buildings in §9-24.01 et seq. of the San Anselmo Municipal Code, shall comply with the applicable requirements of Section 150.0(w).

NOTE: The requirements of Sections 150.0(a) through 150.0(v) apply to new construction. Sections 150.2(a) and 150.2(b) specify which requirements of Sections 150.0(a) through 150.0(v) also apply to

additions or alterations, with the exception that Covered Existing Single-Family Projects, other than projects identified as all-electric construction for new residential buildings in §9-24.01 et seq. of the San Anselmo Municipal Code, shall also be required to comply with Section 150.0(w).

A new Section, (w), is added to Section 150.0 as follows:

(w) Requirements for a Covered Project are outlined by project type in Table 1 of Section 9-19.050 of the San Anselmo Municipal Code. A Covered Existing Single-Family Project, as defined in Section 9-19.020 (11)(ii) of the San Anselmo Municipal Code, that includes an electrical panel upgrade, a kitchen remodel or a laundry room remodel shall comply with the requirements for Measure ER2 in Table 2 of Section 9-19.050 of the San Anselmo Municipal Code. In addition, a Covered Existing Single-Family Project in a building originally permitted for construction on or before December 31, 2010 shall install a set of measures from the Measure Menu in Table 2 of Section 9-19.050 of the San Anselmo Municipal Code, to achieve a total Measure Point Score that is equal to or greater than the Target Score in said table and shall conform to the List of Measure Specifications in Table 3 of Section 9-19.050 of the San Anselmo Municipal Code, except as otherwise described below:

- (i) Projects identified as all-electric construction for new residential buildings in Section 9-24.01 et. seq. of the San Anselmo Municipal Code.
- (ii) Projects less than 750 square feet that are not considered Substantial Improvements.
- (iii) Projects that are limited solely to a newly created attached Accessory Dwelling Units (ADUs) or Junior Accessory Dwelling Unit (JADU) as defined in Section 9-19.020 (3), San Anselmo Municipal Code. A newly created ADU and JADU shall include either additions or conversions of existing space.
- (iv) Mobile Homes, Manufactured Housing, or Factory-built Housing as defined in Division 13 of the California Health and Safety 12 Code (commencing with section 17000 of the Health and Safety Code).
- (v) If due to conditions specific to the project, it is technically or economically infeasible to achieve compliance, the chief building official may reduce the Target Score and/or waive some or all of the mandatory requirements.
- (vi) If the applicant demonstrates that the Energy Budget of the proposed building, as calculated under Section 150.1(b), would be less than or equal to the Energy Budget of the building if it otherwise complied with this Section, 150.0(w).
- (vii) A resident owner or occupant demonstrates that they qualify for the California Alternative Rates for Energy (CARE) or Family Electric Rate Assistance (FERA) program may comply by installing, to the specifications in Table 3 of Section 9-19.050 of the San Anselmo Municipal Code the following:
 - (a) E1: Lighting Measures; and
 - (b) E2: Water Heating Package

In addition, all mandatory measures listed in Table 2 of Section 9-19.050 of the San Anselmo Municipal Code shall be installed.

9-19.040 Requirements for Electric Vehicle Infrastructure - Local amendments to 2022 CALGreen California Green Building Standards Code.

Pursuant to Section 9-1.101(j) of the San Anselmo Municipal Code, the Town has adopted the 2022 edition of the California Green Building Standards Code known as California Code of Regulations, Part 11 of Title 24 (herein referred to as CALGreen Code), including Division A4.6 for Tier 1 with additions, and deletions as provided in this subchapter. Requirements are outlined by project type in Table 1 of Section 9-19.050 of the San Anselmo Municipal Code.

The provisions of this subchapter shall constitute local amendments to the cross-referenced provisions of the 2022 CALGreen Code and shall be deemed to replace the cross-referenced sections of said Code with the respective provisions set forth in this subchapter.

Section 202 of Chapter 2 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

Automatic Load Management System (ALMS). A control system designed to manage load across one or more electric vehicle supply equipment (EVSE), circuits, panels and to share electrical capacity and/or automatically manage power at each connection point. ALMS systems shall be designed to deliver no less than 3.3 kVa (208/240 volt, 16-ampere) to each EV Capable, EV Ready or EVCS space served by the ALMS, and meet the requirements of California Electrical Code Article 625. The connected amperage to the building site for the EV charging infrastructure shall not be lower than the required connected amperage per California Green Building Standards Code, Title 24 Part 11.

Direct Current Fast Charging (DCFC). A parking space provided with electrical infrastructure that meets the following conditions:

- i. A minimum of 48 kVa (480 volt, 100-ampere) capacity wiring.
- ii. Electric vehicle supply equipment (EVSE) located within three (3) feet of the parking space providing a minimum capacity of 80-ampere.

Electric Vehicle Charging Station (EVCS). One or more electric vehicle charging spaces served by electric vehicle charger(s) or other charging equipment allowing charging of electric vehicles. Electric vehicle charging stations are not considered parking spaces. A parking space that includes installation of electric vehicle supply equipment (EVSE) at an EV Ready space. An EVCS space may be used to satisfy EV Ready space requirements. EVSE shall be installed in accordance with the California Electrical Code, Article 625.

Electric Vehicle (EV) Ready Space. [HCD] A vehicle space which is provided with a branch circuit; any necessary raceways, both underground and/or surface mounted; to accommodate EV charging, terminating in a receptacle or a charger.

Electric Vehicle (EV) Capable Space. A vehicle space with electrical panel space and load capacity to support a branch circuit and necessary raceways, both underground and/or surface mounted, to support EV charging.

Level 2 (L2) EV Capable. A parking space provided with electrical infrastructure that meets the following requirements:

- i. Conduit that links a listed electrical panel with sufficient capacity to a junction box or receptacle located within three (3) feet of the parking space.
- ii. The conduit shall be designed to accommodate at least 8.3 kVa (208/240 volt, 40-ampere) per parking space. Conduit shall have a minimum nominal trade size of 1 inch inside diameter and may be sized for multiple circuits as allowed by the California Electrical Code. Conduit shall be installed at a minimum in spaces that will be inaccessible after construction, either trenched underground or where penetrations to walls, floors, or other partitions would otherwise be required for future installation of branch circuits, and such additional elements deemed necessary by the Building Official. Construction documents shall indicate future completion of conduit from the panel to the parking space, via the installed inaccessible conduit.
- iii. The electrical panel shall reserve a space for a 40-ampere overcurrent protective device space(s) for EV charging, labeled in the panel directory as "EV CAPABLE."

- iv. Electrical load calculations shall demonstrate that the electrical panel service capacity and electrical system, including any on-site distribution transformer(s), have sufficient capacity to simultaneously charge all EVs at all required EV spaces at a minimum of 40 amperes.
- v. The parking space shall contain signage with at least a 12” font adjacent to the parking space indicating the space is EV Capable.

Level 1 (L1) EV Ready. A parking space that is served by a complete electric circuit with the following requirements:

- i. A minimum of 2.2 kVa (110/120 volt, 20-ampere) capacity wiring.
- ii. A receptacle labeled “Electric Vehicle Outlet” or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 16-ampere.
- iii. Conduit oversized to accommodate future Level 2 EV Ready (208/240 volt, 40-ampere) at each parking space.

Level 2 (L2) EV Ready. A parking space that is served by a complete electric circuit with the following requirements:

- i. A minimum of 8.3 kVa (208/240 volt, 40-ampere) capacity wiring.
- ii. A receptacle labeled “Electric Vehicle Outlet” or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 30-ampere.

Low Power Level 2 (L2) EV Ready. A parking space that is served by a complete electric circuit with the following requirements:

- i. A minimum of 4.1 kVa (208/240 Volt, 20-ampere) capacity wiring.
- ii. A receptacle labeled “Electric Vehicle Outlet” or electric vehicle supply equipment located within three (3) feet of the parking space. If EVSE is provided the minimum capacity of the EVSE shall be 16-ampere.
- iii. Conduit oversized to accommodate future Level 2 EV Ready (208/240 volt, 40-ampere) at each parking space.

~~Low Power Level 2 Electric Vehicle (EV) Charging Receptacle. [HCD] A 208/240 Volt 20 ampere minimum branch circuit and a receptacle for use by an EV driver to charge their electric vehicle or hybrid electric vehicle.~~

Off-Street Loading Spaces. [BSC-CG, DSA-SS] An area, other than a public street, public way, or other property (and exclusive of off-street parking spaces), permanently reserved or set aside for the loading or unloading of motor vehicles, including ways of ingress and egress and maneuvering areas. Whenever the term "loading space" is used, it shall, unless the context clearly requires otherwise, be construed as meaning off-street loading space. This excludes designated passenger loading/unloading.

Section 301.1 of Chapter 3 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

301.1 Scope. Buildings shall be designed to comply with applicable requirements of San Anselmo Green Building Requirements beginning at Section 9-19.010, San Anselmo Municipal Code, and shall also include the green building measures specified as mandatory in the application checklists contained in this code. ~~Voluntary green building measures are also included in the application checklists and may be included in the design and construction of structures covered by this code, but are not required unless adopted by a city, county, or city and county as specified in Section 101.7.~~

Section 301.1.1 of Chapter 3 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

301.1.1 Additions and alterations. [HCD] The mandatory provisions of Chapter 4 shall be applied to additions and alterations of existing residential buildings ~~where the addition or alteration increases the~~

~~building's conditioned area, volume or size, in accordance with applicable requirements of San Anselmo Green Building Requirements beginning at Section 9-19.010, San Anselmo Municipal Code.~~ The requirements shall apply only to and/or within the specific area of the addition or alteration.

The mandatory provisions of section 4.106.4.1.1~~2~~ may apply to additions or alterations of existing parking facilities or the addition of new parking facilities or the addition of new parking facilities serving existing multifamily buildings. See Section 4.106.4.1.2~~3~~ for application.

NOTE: Repairs including, but not limited to, resurfacing, restriping, and repairing or maintaining existing lighting fixtures are not considered alterations for the purpose of this section.

Section 301.3 of Chapter 3 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

301.3 Nonresidential additions and alterations. [BSC-CG] The provisions of individual sections of Chapter 5 apply to new construction and building additions and alterations ~~of 1,000 square feet or greater, and/or building alterations with a permit valuation of \$200,000 or above~~ (for occupancies within the authority of California Building standards Commission). Code sections relative to additions and alterations shall only apply to the portions of the building being added or altered within the scope of the permitted work.

Section 4.106.4 of Chapter 4 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

4.106.4 Electric vehicle (EV) charging for ~~new construction.~~ New Residential construction shall comply with Section 4.106.4.1 or 4.106.4.2 to facilitate future installation and use of EV chargers. Electric vehicle supply equipment (EVSE) shall be installed in accordance with the California Electrical Code, Article 625. For EVCS signs, refer to Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s). Calculation for spaces shall be rounded up to the nearest whole number.

Exceptions:

1. On a case-by-case basis, where the local enforcing agency has determined EV charging and infrastructure are not feasible based upon one or more of the following conditions:
 - 1.1. Where there is no local utility power supply or the local utility is unable to supply adequate power.
 - 1.2. Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 4.106.4, may adversely impact the construction cost of the project.
2. Accessory Dwelling Units (ADU) and Junior Accessory Dwelling Units (JADU) without additional parking facilities and without electrical panel upgrade or new panel installation. Detached ADUs, attached ADUs, and JADUs without additional parking but with electrical panel upgrades or new panels must have reserved breakers and electrical capacity according to the requirements of A4.106.8.1.
3. Multifamily building projects that have approved entitlements before the code effective date.
4. Parking spaces accessible only by automated mechanical car parking systems are not required to comply with this code section.

~~**4.106.4.1 New one- and two-family dwellings and town houses with private garages.**~~ For each dwelling unit, install a listed raceway to accommodate a dedicated 208-240 volt branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or other enclosure in close

proximity to the proposed location of an EV charger. Raceways are required to be continuous at enclosed, inaccessible or concealed areas and spaces. The service panel and/or subpanel shall provide capacity to install a 40-ampere 208/240-volt minimum dedicated branch circuit and space(s) reserved to permit installation of a branch circuit overcurrent protective device.

Exception: A raceway is not required if a minimum 40-ampere 208/240-volt dedicated EV branch circuit is installed in close proximity to the proposed location of an EV charger at the time of original construction in accordance with the *California Electrical Code*.

4.106.4.1.1 Identification. The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging as “EV CAPABLE”. The raceway termination location shall be permanently and visibly marked as “EV CAPABLE”.

4.106.4.1.2 New multifamily dwellings, hotels and motels and with new parking facilities. Requirements apply to parking spaces that are assigned or leased to individual dwelling units, as well as unassigned residential parking. Visitor or common area parking is not included.

4.106.4.1.1 New Construction. Fifteen percent (15%) of dwelling units with parking spaces shall be EVCS with Level 2 EV Ready. ALMS shall be permitted to reduce load when multiple vehicles are charging. Eighty-five percent (85%) of dwelling units with parking spaces shall be provided with a Low Power Level 2 EV Ready space. EV ready spaces and EVCS in multifamily developments shall comply with California Building Code, Chapter 11A, Section 1109A. EVCS shall comply with the accessibility provisions for EV chargers in the California Building Code, Chapter 11B.

NOTE: The total number of EV spaces should be one-hundred percent (100%) of dwelling units or one-hundred percent (100%) of parking spaces, whichever is less.

4.106.4.1.2 Additions and alterations of existing buildings.

1. When parking facilities upgrade the service panel or parking lot surface is modified, including the removal of paving material and curbing, comply with the number of spaces designated for the project type as outlined in Table 1 of Section 9-19.050 of the San Anselmo Municipal Code. Upgrades shall be required at currently designated vehicle parking spaces. Upgrades shall be required for remaining parking spaces after meeting the accessibility requirements of California Building Code Chapters 11A and 11B.
2. When new parking facilities are added and ALMS is installed, the ALMS system must be designed to deliver no less than 2.2 kVa (110/120 volt, 20-ampere).

When parking is provided, parking spaces for new multifamily dwellings, hotels and motels shall meet the requirements of Sections 4.106.4.2.1 and 4.106.4.2.2. Calculations for spaces shall be rounded up to the nearest whole number. A parking space served by electric vehicle supply equipment or designed as a future EV charging space shall count as at least one standard automobile parking space only for the purpose of complying with any applicable minimum parking space requirements established by a local jurisdiction. See Vehicle Code Section 22511.2 for further details.

4.106.4.2.1 Multifamily development projects with less than 20 dwelling units; and hotels and motels with less than 20 sleeping units or guest rooms.

The number of dwelling units, sleeping units or guest rooms shall be based on all buildings on a project site subject to this section.

- a. **EV Capable.** Ten (10) percent of the total number of parking spaces on a building site, provided for all types of parking facilities, shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE. Electrical load calculations shall demonstrate that the electrical panel service

capacity and electrical system, including any on-site distribution transformer(s), have sufficient capacity to simultaneously charge all EVs at all required EV spaces at a minimum of 40 amperes.

The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as “EV CAPABLE” in accordance with the California Electrical Code.

Exceptions:

1. When EV chargers (Level 2 EVSE) are installed in a number equal to or greater than the required number of EV capable spaces.

2. When EV chargers (Level 2 EVSE) are installed in a number less than the required number of EV capable spaces, the number of EV capable spaces required may be reduced by a number equal to the number of EV chargers installed.

Notes:

a. Construction documents are intended to demonstrate the project’s capability and capacity for facilitating future EV charging.

b. There is no requirement for EV spaces to be constructed or available until receptacles for EV charging or EV chargers are installed for use.

b. **EV Ready.** Twenty five (25) percent of the total number of parking spaces shall be equipped with low power Level 2 EV charging receptacles. For multifamily parking facilities, no more than one receptacle is required per dwelling unit when more than one parking space is provided for use by a single dwelling unit.

Exception: Areas of parking facilities served by parking lifts.

4.106.4.2.2 Multifamily development projects with 20 or more dwelling units, hotels and motels with 20 or more sleeping units or guest rooms.

The number of dwelling units, sleeping units or guest rooms shall be based on all buildings on a project site subject to this section.

a. **EV Capable.** Ten (10) percent of the total number of parking spaces on a building site, provided for all types of parking facilities, shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE. Electrical load calculations shall demonstrate that the electrical panel service capacity and electrical system, including any on-site distribution transformer(s), have sufficient capacity to simultaneously charge all EVs at all required EV spaces at a minimum of 40 amperes.

The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as “EV CAPABLE” in accordance with the California Electrical Code.

Exception: When EV chargers (Level 2 EVSE) are installed in a number greater than five (5) percent of parking spaces required by Section 4.106.4.2.2, Item 3, the number of EV capable spaces required may be reduced by a number equal to the number of EV chargers installed over the five (5) percent required.

Notes:

a. Construction documents are intended to demonstrate the project’s capability and capacity for facilitating future EV charging.

b. There is no requirement for EV spaces to be constructed or available until receptacles for EV charging or EV chargers are installed for use.

b. **EV Ready.** ~~Twenty five (25) percent of the total number of parking spaces shall be equipped with low power Level 2 EV charging receptacles. For multifamily parking facilities, no more than one receptacle is required per dwelling unit when more than one parking space is provided for use by a single dwelling unit.~~

~~Exception: Areas of parking facilities served by parking lifts.~~

e. **EV Chargers.** ~~Five (5) percent of the total number of parking spaces shall be equipped with Level 2 EVSE. Where common use parking is provided, at least one EV charger shall be located in the common use parking area and shall be available for use by all residents or guests.~~

~~When low power Level 2 EV charging receptacles or Level 2 EVSE are installed beyond the minimum required, an automatic load management system (ALMS) may be used to reduce the maximum required electrical capacity to each space served by the ALMS. The electrical system and any on-site distribution transformers shall have sufficient capacity to deliver at least 3.3 kW simultaneously to each EV charging station (EVCS) served by the ALMS. The branch circuit shall have a minimum capacity of 40 amperes and installed EVSE shall have a capacity of not less than 30 amperes. ALMS shall not be used to reduce the minimum required electrical capacity to the required EV capable spaces.~~

4.106.4.32.2.1 Electric vehicle charging stations (EVCS).

Electric vehicle charging stations required by Section 4.106.4.12.2, ~~Item 3 and 4.106.4.2~~, shall comply with Section 4.106.4.32.2.1.

Exception: Electric vehicle charging stations serving public accommodations, public housing, motels, and hotels shall not be required to comply with this section. See *California Building Code*, Chapter 11B, for applicable requirements.

4.106.4.3.12.2.1.1 Location.

EVCS shall comply with at least one of the following options:

1. The charging space shall be located adjacent to an accessible parking space meeting the requirements of the *California Building Code*, Chapter 11A, to allow use of the EV charger from the accessible parking space.
2. The charging space shall be located on an accessible route, as defined in the *California Building Code*, Chapter 2, to the building.

Exception: Electric vehicle charging stations designed and constructed in compliance with the *California Building Code*, Chapter 11B, are not required to comply with Section 4.106.4.3.12.2.1.1 and Section 4.106.4.3.22.2.1.2, Item 3.

4.106.4.3.22.2.1.2 Electric vehicle charging stations (EVCS) d Dimensions.

The charging spaces shall be designed to comply with the following:

1. The minimum length of each EV space shall be 18 feet (5486 mm).
2. The minimum width of each EV space shall be 9 feet (2743 mm).
3. One in every 25 charging spaces, but not less than one, shall also have an 8-foot (2438 mm) wide minimum aisle. A 5-foot (1524 mm) wide minimum aisle shall be permitted provided the minimum width of the EV space is 12 feet (3658 mm).
 - a. Surface slope for this EV space and the aisle shall not exceed 1 unit vertical in 48 units horizontal (2.083 percent slope) in any direction.

Exception: Where the Town of San Anselmo Municipal Code permits parking space dimensions that are less than the minimum requirements stated in this section 4.106.4.3.2, and the compliance with which would be infeasible due to particular circumstances of a project, an exception may be granted while

remaining in compliance with California Building Code Section Table 11B-228.3.2.1 and 11B-812, as applicable.

4.106.4.2.2.1.3 Accessible EV spaces. In addition to the requirements in Sections 4.106.4.2.2.1.1 and 4.106.4.2.2.1.2, all EVSE, when installed, shall comply with the accessibility provisions for EV chargers in the *California Building Code*, Chapter 11B. EV ready spaces and EVCS in multifamily developments shall comply with *California Building Code*, Chapter 11A, Section 1109A.

4.106.4.4 Direct current fast charging stations (DCFC). One DCFC may be substituted for up to five (5) EVCS to meet the requirements of 4.106.4.1 and 4.106.4.2. Where ALMS serve DCFC stations, the power demand from the DCFC shall be prioritized above Level 1 and Level 2 spaces.

4.106.4.2.3 EV space requirements.

1. Single EV space required. Install a listed raceway capable of accommodating a 208/240 volt dedicated branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or enclosure in close proximity to the location or the proposed location of the EV space. Construction documents shall identify the raceway termination point, receptacle or charger location, as applicable. The service panel and/or subpanel shall have a 40 ampere minimum dedicated branch circuit, including branch circuit overcurrent protective device installed, or space(s) reserved to permit installation of a branch circuit overcurrent protective device.

Exception: A raceway is not required if a minimum 40 ampere 208/240 volt dedicated EV branch circuit is installed in close proximity to the location or the proposed location of the EV space, at the time of original construction in accordance with the *California Electrical Code*.

1. Multiple EV spaces required. Construction documents shall indicate the raceway termination point and the location of installed or future EV spaces, receptacles, or EV chargers. Construction documents shall also provide information on amperage of installed or future receptacles or EVSE, raceway method(s), wiring schematics and electrical load calculations. Plan design shall be based upon a 40 ampere minimum branch circuit. Required raceways and related components that are planned to be installed underground, enclosed, inaccessible or in concealed areas and spaces shall be installed at the time of original construction.

Exception: A raceway is not required if a minimum 40 ampere 208/240 volt dedicated EV branch circuit is installed in close proximity to the location or the proposed location of the EV space at the time of original construction in accordance with the *California Electrical Code*.

4.106.4.2.4 Identification.

The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as "EV CAPABLE" in accordance with the *California Electrical Code*.

4.106.4.2.5 Electric Vehicle Ready Space Signage.

Electric vehicle ready spaces shall be identified by signage or pavement markings, in compliance with Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s).

4.106.4.3 Electric vehicle charging for additions and alterations of parking facilities serving existing multifamily buildings.

When new parking facilities are added, or electrical systems or lighting of existing parking facilities are added or altered and the work requires a building permit, ten (10) percent of the total number of parking spaces added or altered, shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE.

Notes:

1. ~~Construction documents are intended to demonstrate the project's capability and capacity for facilitating future EV charging.~~
2. ~~There is no requirement for EV spaces to be constructed or available until EV chargers are installed for use.~~

Section A4.106.8 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

New construction shall comply with Sections A4.106.8.1, ~~A4.106.8.2 or A4.106.8.3~~, to facilitate future installation and use of electric vehicle chargers. Electric vehicle supply equipment (EVSE) shall be installed in accordance with the *California Electrical Code*, Article 625.

Section A4.106.9.2 of the 2022 CALGreen Code is hereby included as a requirement for new Multifamily Buildings.

Provide on-site bicycle parking for at least one bicycle per every one dwelling unit. Acceptable parking facilities shall be conveniently reached from the street and may include, but not be limited to:

1. Covered, lockable enclosures with permanently anchored racks for bicycles.
2. Lockable bicycle rooms with permanently anchored racks.
3. Lockable, permanently anchored bicycle lockers.

Section 5.106.5.3 of the 2022 CALGreen Code is hereby amended as underlined and struck through:

5.106.5.3 Electric vehicle (EV) charging.

~~[N]~~ Construction to provide electric vehicle infrastructure and facilitate electric vehicle charging shall comply with Section 5.106.5.3.1 and shall be provided in accordance with regulations in the *California Building Code* and the *California Electrical Code*. Accessible EVCS shall be provided in accordance with the *California Building Code Chapter 11B Section 11B-228.3*. For EVCS signs, refer to Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s). Calculation for spaces shall be rounded up to the nearest whole number.

Exceptions:

1. On a case-by-case basis, where the local enforcing agency has determined EV charging and infrastructure are not feasible based upon one or more of the following conditions:
 - a. Where there is no local utility power supply
 - b. Where the local utility is unable to supply adequate power.
 - c. Where there is evidence suitable to the local enforcement agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 5.106.5.3, may adversely impact the construction cost of the project.
2. Parking spaces accessible only by automated mechanical car parking systems are not required to comply with this code section.

Section A5.106.5 of Appendix A5 of the 2022 CALGreen Code is hereby amended as struck through:

~~A5.106.5.1 Designated parking for clean air vehicles.~~

~~In new projects or additions or alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of zero-emitting, fuel-efficient and carpool/van pool vehicles as listed in code Sections A5.106.5.1.1 or A5.106.5.1.2.~~

~~A5.106.1.1.1 Tier 1.~~

~~Provide 35 percent designated parking spaces of the total number of parking spaces, for any combination of zero-emitting, fuel-efficient and carpool/van pool vehicles. Calculation for spaces shall be rounded up to the whole number.~~

~~**Note:** Designated parking for clean air vehicles shall count toward the total parking spaces required by the local enforcing agencies.~~

~~**A5.106.1.1.2 Tier 2.**~~

~~Provide 50 percent designated parking spaces of the total number of parking spaces, for any combination of zero-emitting, fuel-efficient and carpool/van pool vehicles. Calculation for spaces shall be rounded up to the whole number.~~

~~**Note:** Designated parking for clean air vehicles shall count toward the total parking spaces required by the local enforcing agencies.~~

~~**A5.06.5.1.3 Parking stall marking.**~~

~~Paint, in the paint for stall striping, the following characters such that the lower edge of the last word aligns with the end of the stall striping and is visible beneath a parked vehicle:~~

~~CLEAN AIR/~~

~~VANPOOL/EV~~

~~**Note:** Vehicles bearing Clean Air Vehicle stickers from expired HOV lane programs may be considered eligible for designated parking spaces.~~

~~**A5.106.5.1.1 Vehicle designations.**~~

~~Building managers may consult with local Transit Management Associations (TMAs) for methods of designating qualifying vehicles, such as issuing parking stickers.~~

~~**Notes:**~~

- ~~1. Information on qualifying vehicles, car labeling regulations and DMV CAV decals may be obtained from the following sources:

 - ~~a. California DriveClean.~~
 - ~~b. California Air Resources Board.~~
 - ~~c. US EPA fuel economy regulations and standards.~~
 - ~~d. DMV Registration Operations.~~~~
- ~~2. Purchasing policy and refueling sites for zero-emitting vehicles for state employees use can be found at the Department of General Services.~~

A5.106.5.3 Electric Vehicle (EV) charging. [N]

Construction shall comply with Section A5.106.5.3.1 or A5.106.5.3.2, and in accordance with regulations in the *California Building Code* and the *California Electrical Code*. Accessible EVCS shall be provided in accordance with the California Building Code Chapter 11B Section 11B-228.3. For EVCS signs, refer to Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s). Calculation for spaces shall be rounded up to the nearest whole number.

Exceptions:

1. On a case-by-case basis where the local enforcing agency has determined compliance with this section is not feasible based upon one of the following conditions:
 - a. Where there is no local utility power supply.
 - b. Where the local utility is unable to supply adequate power.
 - c. Where there is evidence suitable to the local enforcement agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section A5.106.5, may adversely impact the construction cost of the project.

2. Parking spaces accessible only by automated mechanical car parking systems are not required to comply with this code section.

A5.106.5.3 Nonresidential Occupancies – Shared Parking Facilities.

A5.106.5.3.1 New Construction - Tier 1.

Table A5.106.5.3.1 shall be used to determine the number of EV capable spaces required. Refer to section 5.106.5.3 for design space requirements.

When EV capable spaces are provided with EVSE to create EVCS per Table A5.106.5.3.1.

TABLE A5.106.5.3.1

TOTAL NUMBER OF ACTUAL PARKING SPACES	TIER 1 NUMBER OF REQUIRED EV CAPABLE SPACES	TIER 1 NUMBER OF EVCS (EV CAPABLE SPACES PROVIDED WITH EVSE) ²
0-9	2	0
10-25	5	0
26-50	11	2
51-75	19	3
76-100	26	4
101-150	38	6
151-200	53	9
201 and over	30 percent of total ¹	25 percent of EV capable spaces ¹

1. Calculation for spaces shall be rounded up to the nearest whole number.

2. The number of required EVCS (EV capable spaces provided with EVSE) in column 3 count toward the total number of required EV capable spaces shown in column 2.

A5.106.5.3.2 Additions and alterations of existing buildings Tier 2.

1. When parking facilities upgrade the service panel or parking lot surface is modified, including the removal of paving material and curbing, comply with the number of spaces designated for the project type as outlined in Table 1 of Section 9-19.050 of the San Anselmo Municipal Code. Upgrades shall be required at currently designated vehicle parking spaces. Upgrades shall be required for remaining parking spaces after meeting the accessibility requirements of California Building Code Chapters 11A and 11B.
2. When new parking facilities are added and ALMS is installed, the ALMS system must be designed to deliver no less than 2.2 kVa (110/120 volt, 20-ampere).

A5.106.5.4 Direct current fast charging stations. One DCFC may be substituted for up to five (5) EVCS to meet the requirements of 5.106.5.3. Where ALMS serve DCFC stations, the power demand from the DCFC shall be prioritized above Level 1 and Level 2 spaces.

~~Table A5.106.5.3.2 shall be used to determine the number of EV capable spaces required. Refer to section 5.106.5.3 for design space requirements.~~

~~When EV capable spaces are provided with EVSE to create EVCS per Table A5.106.5.3.1, refer to Section 5.106.5.3.2 for the allowed use of Level 2 or Direct Current Fast Charger (DCFC) and Section 5.106.5.3.3 for the allowed use of Automatic Load Management Systems (ALMS).~~

TABLE A5.106.5.3.2

TOTAL NUMBER OF ACTUAL PARKING SPACES	TIER 2 NUMBER OF REQUIRED EV-CAPABLE SPACES	TIER 2 NUMBER OF EVCS (EV-CAPABLE SPACES PROVIDED WITH EVSE)²
0-9	3	0
10-25	8	3
26-50	17	6
51-75	28	9
76-100	40	13
101-150	57	19
151-200	79	26
201 and over	45 percent of total ¹	33 percent of EV-capable spaces ¹

1.

Calculation for spaces shall be rounded up to the nearest whole number.

2. The number of required EVCS (EV-capable spaces provided with EVSE) in column 3 count toward the total number of required EV-capable spaces shown in column 2.

Section 5.106.5.4 of the 2022 CALGreen Code is hereby amended as struck through:

5.106.5.4 Electric vehicle (EV) charging readiness: medium-duty and heavy-duty. [N]

Construction shall comply with Section 5.106.5.4.1 to facilitate future installation of electric vehicle supply equipment (EVSE). Construction for warehouses, grocery stores and retail stores with planned off-street loading spaces shall also comply with Section 5.106.5.4.1 for future installation of medium- and heavy-duty EVSE. Accessible EVCS shall be provided in accordance with the California Building Code Chapter 11B Section 11B-228.3. For EVCS signs, refer to Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s).

Exceptions:

1. On a case-by-case basis where the local enforcing agency has determined compliance with this section is not feasible based upon one of the following conditions:
 - a. Where there is no local utility power supply.
 - b. Where the local utility is unable to supply adequate power.
 - c. Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 5.106.5.3, may adversely impact the construction cost of the project.

~~When EVCS(s) are installed, it shall be in accordance with the California Building Code, the California Electrical Code as follows:~~

5.106.5.4.1 Electric vehicle charging readiness requirements for w Warehouses, grocery stores and retail stores with planned off-street loading spaces.

[N] In order to avoid future demolition when adding EV supply and distribution equipment, spare raceway(s) or busway(s) and adequate capacity for transformer(s), service panel(s) or subpanel(s) shall be installed at the time of construction in accordance with the *California Electrical Code*. Construction plans and specifications shall include, but are not limited to, the following:

1. The transformer, main service equipment and subpanels shall meet the minimum power requirement in Table 5.106.5.4.1 to accommodate the dedicated branch circuits for the future installation of EVSE.
2. The construction documents shall indicate one or more location(s) convenient to the planned off-street loading space(s) reserved for medium- and heavy-duty ZEV charging cabinets and charging dispensers, and a pathway reserved for routing of conduit from the termination of the raceway(s) or busway(s) to the charging cabinet(s) and dispenser(s), as shown in Table 5.106.5.4.1.
3. Raceway(s) or busway(s) originating at a main service panel or a subpanel(s) serving the area where potential future medium- and heavy-duty EVSE will be located and shall terminate in close proximity to the potential future location of the charging equipment for medium- and heavy-duty vehicles.
4. The raceway(s) or busway(s) shall be of sufficient size to carry the minimum additional system load to the future location of the charging for medium- and heavy-duty EVs as shown in Table 5.106.5.4.1.

TABLE 5.106.5.4.1, Raceway Conduit and Panel power Requirements for Medium-and-Heavy-Duty EVSE [N]

Building type	Building Size (sq. ft.)	Number of Off-street loading spaces	Additional capacity Required (kVa) for Raceway & Busway and Transformer & Panel
Grocery	10,000 to 90,000	1 or 2	200
		3 or Greater	400
	Greater than 90,000	1 or Greater	400
Retail	10,000 to 135,000	1 or 2	200
		3 or Greater	400
	Greater than 135,000	1 or Greater	400
Warehouse	20,000 to 256,000	1 or 2	200
		3 or Greater	400
	Greater than 256,000	1 or Greater	400

9-19.050 Standards for compliance.

The San Anselmo Green Building Requirements define compliance thresholds for different projects that are covered by this ordinance. These standards are summarized below in Table 1. The energy efficiency and electrification measures menu and specifications are detailed in Tables 2 and 3.

Table 1: Requirements by Project Type and Size			
Project Type and Size	Green Building Requirements	Energy Efficiency Requirements	Electric Vehicle Requirements
Single and Two-Family New Construction	CALGreen Tier 1	Meet the standards outlined for the project in the 2022 California Energy Code	Comply with CALGreen Measure A4.106.8.1, Tier 1
Multifamily Residential New Construction	<u>CALGreen Tier 1</u> <u>Install long-term bike parking per CALGreen A4.106.9.2, as modified by Section 9-19.040</u>		Of the total parking spaces, (i) 15% Level 2 (L2) EVCS (ii) 85% Low-Power Level 2 (LPL2) EV Ready
Nonresidential New Construction	<u>CALGreen Tier 1</u>	Meet the standards outlined for the project in the 2022 California Energy Code	For Nonresidential: comply with CALGreen Measure A5.106.5.3.1, Tier 1; AND For Nonresidential Grocery, Retail, or Warehouses planning off-street medium-heavy-duty loading spaces: comply with CALGreen Measure 5.106.5.4
Single and Two-Family Additions and Alterations less than 750 square feet	CALGreen Mandatory Conductor ready required for laundry room and kitchen remodels regardless of remodel size.	Meet the standards outlined for the project in the 2022 California Energy Code	If the project is upgrading the main electrical service panel, comply with CALGreen Measure A4.106.8.1, Tier 1

Table 1: Requirements by Project Type and Size			
Project Type and Size	Green Building Requirements	Energy Efficiency Requirements	Electric Vehicle Requirements
Single and Two-Family Additions and Alterations 750 square feet or greater; and Substantial Improvements	CALGreen Tier 1	Using the Measure Menu in Table 2, achieve a total score that is equal to or greater than the Target Score for the applicable climate zone and install the electric readiness measures (ER2) as applicable in Table 3	If the project is upgrading the main electrical service panel, comply with CALGreen Measure A4.106.8.1, Tier 1
Multifamily Residential Additions and Alterations less than 750 square feet	CALGreen Mandatory Conductor ready required for laundry room and kitchen remodels regardless of remodel size.	Meet the standards outlined for the project in the 2022 California Energy Code	If the service panel is modified, add designated electrical capacity for 20% of onsite parking spaces to be Level 2 EV Ready. If parking lot surface is modified (paving material and curbing removed): (i) add raceway to a minimum of 50% of exposed parking spaces, OR (ii) add raceway to a minimum of 20% of exposed parking spaces and install at minimum 5% EVCS to parking spaces requiring any combination of Level 2 and Direct Current Fast Charging EVSE, except at least one Level 2 EVSE shall be provided.
Multifamily Residential Additions and Alterations 750 square feet or greater; and Substantial Improvements	CALGreen Tier 1		
Nonresidential Additions and Alterations			Where existing electrical service will not be upgraded in the existing project scope, designate capacity for parking spaces to the maximum extent that does not require an upgrade to existing electrical service.

The following conditions also apply to Table 1:

- (a) Cumulative new construction or remodels during the preceding 36-month period from the acceptance of this application shall be considered as a single covered project, and subject to the highest compliance threshold based on the cumulative project size or valuation.
- (b) Mixed use (residential and commercial) projects must comply either with the applicable covered project requirements for the respective residential and commercial portions of the project or may propose to utilize a mixed-use rating system, subject to approval by the chief building official.

The following are exceptions to Table 1:

(1) Where the requirements of Tier 1 are infeasible as a result of the market, economy, or technology available as determined by the chief building official (CBO), the CBO may provide an alternative or waive the requirement.

Measure		Climate Zone	Steps
		2	1) Choose your Climate Zone using CEC toolfinder ¹
Specification	Spec. ID (Refer to Table 3)	Target Score	2) Minimum Target Score needed to comply (1 point = 1MMBTU savings per yr.)
		8	
Lighting	E1	Mandatory	3) Choose a measure or a combination of measures that adds up to the minimum target score above based on CZ. Measures listed as “Mandatory” MUST be installed. 4) Use the Specification Number (Spec. ID) column as a key and conform to the specifications in Table 3 below. Table 3 describes, specifies, and details compliance with each corresponding measure.
Water Heating Package	E2	1	
Air Sealing	E3	1	
R-49 Attic Insulation	E4	1	
Duct Sealing	E5	1	
New Ducts + Duct Sealing	E6	2	
PV + Electric Ready Pre-Wire	ER1	12	
Electric Readiness Measures	ER2	Mandatory (if remodeling kitchen, laundry, or upgrading panel)	
HPWH	FS1	12	
High Eff HPWH	FS2	13	
HVAC Heat Pump	FS3	13	
High Eff HVAC Heat Pump	FS4	14	
Heat Pump Clothes Dryer	FS5	1	
Induction Cooktop	FS6	1	

¹California Energy Commission climate zone tool finder at <https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/climate-zone-tool-maps-and>.

The following conditions also apply to Table 2:

(a) Unless otherwise specified, the requirements shall apply to the entire dwelling unit, not just the additional or altered portion.

(b) Measures from the Measure Menu in Table 2 and specified in Table 3, that already exist in the home, may be counted towards compliance with these requirements, unless otherwise specified in Table 3.

(c) Measures from the Measure Menu in Table 2 that are to be installed to satisfy requirements under the State Energy Code, Title 24, Part 6, may also be counted towards compliance with these requirements. Where these requirements conflict with other Energy Code requirements, the stricter requirements shall prevail.

Table 3. List of Measure Specifications

ID	Measure Specification
Energy Measures	
E1	Lighting Measures – Replace all interior and exterior screw-in incandescent, halogen, and compact fluorescent lamps with LED lamps. Install photocell controls on all exterior lighting luminaires.
E2	<p>Water Heating Package: Add exterior insulation meeting a minimum of R-6 to existing storage water heaters. Insulate all accessible hot water pipes with pipe insulation a minimum of ¾ inch thick. This includes insulating the supply pipe leaving the water heater, piping to faucets underneath sinks, and accessible pipes in attic spaces or crawlspaces. Upgrade fittings in sinks and showers to meet current California Green Building Standards Code (Title 24, Part 11) Section 4.303 water efficiency requirements.</p> <p>Exception 1: Water heater blanket is not required on water heaters less than 20 gallons.</p> <p>Exception 2: Water heater blanket not required if application of a water heater blanket voids the warranty on the water heater.</p> <p>Exception 3: Upgraded fixtures are not required if existing fixtures have rated or measured flow rates of no more than ten percent greater than 2022 California Green Building Standards Code (Title 24, Part 11) Section 4.303 water efficiency requirements.</p> <p>Exception 4: Water heaters with factory installed insulation of R-24 or greater</p>
E3	<p>Air Sealing: Seal all accessible cracks, holes, and gaps in the building envelope at walls, floors, and ceilings. Pay special attention to penetrations including plumbing, electrical, and mechanical vents, recessed can light luminaires, and windows. Weather-strip doors if not already present. Verification shall be conducted following a prescriptive checklist that outlines which building aspects need to be addressed by the permit applicant and verified by an inspector. Compliance can also be demonstrated with blower door testing conducted by a certified HERS Rater no more than three years prior to the permit application date that either: a) shows at least a 30 percent reduction from pre-retrofit conditions; or b) shows that the number of air changes per hour at 50 Pascals pressure difference (ACH50) does not exceed ten. If combustion appliances are located within the pressure boundary of the building, conduct a combustion safety test by a professional certified by the Building Performance Institute in accordance with the ANSI/BPI-1200-S-2017 Standard Practice for Basic Analysis of Buildings¹, the Whole House Combustion Appliance Safety Test Procedure for the Comfortable Home Rebates Program 2020 or the California Community Services and Development Combustion Appliance Safety Testing Protocol.</p>
E4	R-49 Attic Insulation: Attic insulation shall be installed to achieve a weighted assembly U-factor of 0.020 or insulation installed at the ceiling level shall have a thermal resistance of R-49 or greater for the insulation alone. Recessed downlight luminaires in

	<p>the ceiling shall be covered with insulation to the same depth as the rest of the ceiling. Luminaires not rated for insulation contact must be replaced or fitted with a fire-proof cover that allows for insulation to be installed directly over the cover.</p> <p>Exception: In buildings where existing R-30 is present and existing recessed downlight luminaires are not rated for insulation contact, insulation is not required to be installed over the luminaires.</p>
E5	Duct Sealing: Air seal all space conditioning ductwork to meet the requirements of the 2022 Title 24 Section 150.2(b)1E. The duct system must be tested by a HERS Rater no more than three years prior to the Covered Single Family Project permit application date to verify the duct sealing and confirm that the requirements have been met. This measure may not be combined with the New Ducts and Duct Sealing measure in this Table.
E6	New Ducts + Duct Sealing: Replace existing space conditioning ductwork with new R-8 ducts that meet the requirements of 2022 Title 24 Section 150.0(m)11. This measure may not be combined with the Duct Sealing measure in this Table. To qualify, a preexisting measure must have been installed no more than three years before the Covered Single Family Project permit application date.
E7	Windows: Replace all existing windows with high performance windows with an area-weighted average U-factor no greater than 0.32.
E8	R-13 Wall Insulation: Install wall insulation in all exterior walls to achieve a weighted U-factor of 0.102 or install wall insulation in all exterior wall cavities that shall result in an installed thermal resistance of R-13 or greater for the insulation alone.
Fuel Substitution Measures	
FS1	Heat Pump Water Heater (HPWH): Replace all existing electric resistance and natural gas storage water heaters with heat pump water heaters.
FS2	High Efficiency Heat Pump Water Heater (HPWH): Replace all existing electric resistance and natural gas storage water heaters with heat pump water heaters with a Northwest Energy Efficiency Alliance (NEEA) Tier 3 or higher rating.
FS3	HVAC Heat Pump: Replace all existing gas space heating system and existing electric resistance heating systems with electric heat pump systems.
FS4	High Efficiency HVAC Heat Pump: Replace all existing gas space heating system and existing electric resistance heating systems with electric heat pump systems with a SEER rating of 21 or greater and an HSPF rating of 11 or greater.
FS5	Heat Pump Clothes Dryer: Replace all existing gas or electric resistance clothes dryers with heat pump dryers with no resistance element and cap the gas lines.
FS6	Induction Cooktop: Replace all existing gas and electric resistance stove tops with inductive stove tops and cap the gas lines.
Solar PV and Electric-Readiness Measures	
ER1	<p>PV+ Electric Ready Pre-Wire:</p> <p>For New PV Systems: Install a new solar PV system that meets the requirements of 2022 Title 24 Section 150.1(c)14 and upgrade the service panel to meet the requirements of ER2.G. and install any two of the other measures from ER2.A – ER2.F.</p> <p>For Existing PV Systems: If the home already has an existing PV system, to claim credit for this measure, ER1, upgrade the service panel to meet the requirements of ER2.G.</p>

	and install any two of the other measures from ER2.A – ER2.F.
ER2	<p>Electric Readiness Measures:</p> <p>To claim credit for Item ER1, in addition to the solar PV system installed, upgrade the panelboard to meet the requirements of Item ER2.G and install any two of the other measures ER2.A – ER2.F, below to allow for installation of electric appliances at a future date.</p> <p>For any Covered Project, if the service panel is being upgraded, install any two of the other measures below.</p> <p>If the laundry room is being remodeled, comply with Item ER2.D and upgrade the panelboard to meet the requirements of Item ER2.G.</p> <p>If the kitchen is being remodeled, comply with Item ER2.C and upgrade the service panel to meet the requirements of Item ER2.G.</p> <ul style="list-style-type: none"> A. Heat Pump Water Heater Ready, as specified in Section 150.0(n)1. B. Heat Pump Space Heater Ready, as specified in Section 150.0(t). C. Electric Cooktop Ready, as specified in Section 150.0(u). D. Electric Clothes Dryer Ready, as specified in Section 150.0(v). E. Energy Storage Systems (ESS) Ready, as specified in Section 150.0(s). F. EV Charger Ready. Install a listed raceway for an EV charger, that meets the requirements of the California Green Building Standards Code (Title 24, Part 11) Section A4.106.8.1, Tier 1 and 2, which otherwise applies to new construction. G. Upgrade the panelboard serving the individual dwelling to either: <ul style="list-style-type: none"> (i) a minimum 200 amp panel with a minimum 225 amp busbar rating to accommodate future connection of electric appliances, including heat pump water heaters, heat pump space heaters, electric cooktops, electric clothes dryers as specified in California Energy Code Section 150.0 (n), (t), (u) and (v) and Level 2 electric vehicle supply equipment; or, (ii) provide electrical load calculations and appliance specifications for serving all of these end-uses with a minimum 100-amp panel. <p>Exception: If an electrical permit is not otherwise required for the project other than compliance with this Item, ER2.</p>

9-19.060 Incentives for compliance.

In addition to the required standards for compliance, the Town Council may establish by resolution, financial or application processing incentives and/or award or recognition programs to encourage higher levels of green building compliance for a project.

9-19.070 Administrative procedures.

The procedures for compliance with the provisions of this chapter shall include, but not be limited to the following:

- (a) *Project design.* Applicants for a covered project are strongly encouraged to involve a qualified green building rater in the initial design phases of the project in advance of submittal of an application to determine applicable green building compliance thresholds and the most cost effective and appropriate means of achieving compliance.
- (b) *Planning applications.* If a discretionary planning application is required for a covered project, applicants should be prepared to identify expected green building measures to be included in the project to achieve the compliance thresholds. Applicants should identify any anticipated difficulties in achieving compliance and any exemptions from the requirements of this chapter that may be requested.
- (c) *Building plan check review.* Upon submittal of an application for a building permit, building plans for any covered project shall include a green building program description and completed checklist. The checklist shall be incorporated onto a separate full-sized plan sheet included with the building plans. Evidence that the project, as indicated by the project plans and green building program description, will achieve the standards for compliance outlined in Section 9-19.050 shall be provided prior to issuance of a building permit.
- (d) *Changes during construction.* During the construction process, alternate green building measures may be substituted, provided that documentation of the proposed change and the project's continued ability to achieve the standards for compliance to the chief building official shall be provided.
- (e) *Final building inspection.* Prior to final building inspection and occupancy for any covered project, evidence that project construction has achieved the required compliance set forth in the standards for compliance outlined in Section 9-19.050 shall be provided. The chief building official shall review the documentation submitted by the applicant and determine whether the project has achieved the compliance threshold as set forth in the standards for compliance outlined in Section 19.04.140. If the chief building official determines that the applicant has met these requirements, the final building inspection may proceed.
- (f) *Conflict with other laws.* The provisions of this chapter are intended to be in addition to and not in conflict with other laws, regulations and ordinances relating to building construction and site development. If any provision of this chapter conflicts with any duly adopted and valid statutes or regulations of the federal government or the state of California, the federal or state statutes or regulations shall take precedence.

19.04.170 Exemptions.

- (a) The provisions of this chapter shall not apply to:
 - (1) Buildings which are temporary (such as construction trailers).
 - (2) Building area which is not or is not intended to be conditioned space.
 - (3) Any requirements of this chapter which would impair the historic integrity of any building listed on a local, state or federal register of historic structures, as determined by the chief building official and as regulated by the California Historic Building Code (Title 24, Part 8). In making such a determination, the chief building official may require the submittal of an evaluation by an architectural historian or similar expert.
- (b) As outlined in the 2022 CALGreen code, section 4.106.4 and A5.106.5, applicants may be exempted from the electric vehicle charging requirements on a case-by-case basis where the local enforcing agency has determined EV charging and infrastructure are not feasible based upon one or more of the following conditions:
 - (1) Where there is no commercial power supply or the local utility is unable to supply adequate power.
 - (2) Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of section 4.106.4 and A5.106.5 may adversely impact the construction cost of the project.

- (3) ADUs and JADUs without additional parking facilities.
 - (4) Parking spaces accessible only by automated mechanical car parking systems are not required to comply with CALGreen Code section 4.106.4 and A5.106.5
- (c) **Hardship or infeasibility exemption.** If an applicant for a covered project believes that circumstances exist that make it a hardship or infeasible to meet the requirements of this chapter, the applicant may request an exemption as set forth below. In applying for an exemption, the burden is on the applicant to show hardship or infeasibility.
- (1) *Application.* Based on the following, the applicant shall identify in writing the specific requirements of the standards for compliance that the project is unable to achieve and the circumstances that make it a hardship or infeasible for the project to comply with this chapter. The applicant may not petition for relief from any requirement of the 2022 California Energy Code (Title 24, Part 6) and referenced standards, or the 2022 California Green Building Standards (Title 24, Part 11) of the California Building Standards Code. Circumstances that constitute hardship or infeasibility shall include one of the following:
 - a. That the cost of achieving compliance is disproportionate to the overall cost of the project;
 - b. That strict compliance with these standards would create or maintain a hazardous condition(s) and present a life safety risk to the occupants.
 - (2) *Granting of exemption.* If the chief building official determines that it is a hardship or infeasible for the applicant to fully meet the requirements of this chapter and that granting the requested exemption will not cause the building to fail to comply with the 2022 California Energy Code (Title 24, Part 6) and referenced standards, or the 2022 California Green Building Standards (Title 24, Part 11) of the California Building Standards Code, the chief building official shall determine the maximum feasible threshold of compliance reasonably achievable for the project. In making this determination, the chief building official shall consider whether alternate, practical means of achieving the objectives of this chapter can be satisfied, such as reducing comparable energy use at an off-site location within the county. If an exemption is granted, the applicant shall be required to comply with this chapter in all other respects and shall be required to achieve the threshold of compliance determined to be achievable by the chief building official.
 - (3) *Denial of exception.* If the chief building official determines that it is reasonably possible for the applicant to fully meet the requirements of this chapter, the request shall be denied, and the applicant shall be notified of the decision in writing. The project and compliance documentation shall be modified to comply with the standards for compliance.
 - (4) *Appeal.* Any aggrieved applicant or person may appeal the determination of the chief building official regarding the granting or denial of an exemption or compliance with any other provision of this chapter. An appeal of a determination of the chief building official shall be filed in writing and processed in accordance with the provisions of Section 10-1.06 of this code.

(4) *Appeal.* Any aggrieved applicant or person may appeal the determination of the chief building official regarding the granting or denial of an exemption or compliance with any other provision of this chapter. An appeal of a determination of the chief building official shall be filed in writing and processed in accordance with the provisions of Section 10-1.06 of the San Anselmo Municipal Code.

SECTION 5. Severability. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or unlawful, such decision shall not affect the validity of the remaining portions of this ordinance. The Town Council hereby declares that it would have passed this

ordinance, and each section, subsection, clause or phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses and phrases be declared unconstitutional or unlawful.

SECTION 6. Effective Date. This ordinance shall take effect and be in force thirty (30) days after the date of its passage, provided that the additional energy efficiency requirements of this Ordinance cannot be enforced by the Town until it has further been approved by the California Energy Commission (Cal. Pub. Res. Code §25402.1(h)(2)). Within fifteen (15) days following its passage, the ordinance shall be published with the names of those Town Council members voting for and against the ordinance and the Town Clerk shall post in the office of the town clerk a certified copy of the full text of the adopted ordinance along with the names of the members voting for and against the ordinance. Prior to the effective date, a copy of this Ordinance shall be filed with the California Building Standards Commission complete with local findings for each local amendment to the California Building Standards Code, as required by Cal. Health and Safety § 17959.

The foregoing ordinance was introduced at a regular meeting of the San Anselmo Town Council on the 22nd day of August, 2023 and was adopted at a regular meeting on the 12th day of September, 2023 by the following vote:

AYES:

NOES:

ABSENT:

Steve Burdo, Mayor

ATTEST

Serge Avila, Town Clerk
